

# Emergency Cooling Checklist

## BEFORE YOU CALL AIRPAC FIND OUT:

- What type of space and what are you cooling?
- Size of space to be cooled?
- Size of the AC system that failed?
- Determine BTU required for emergency cooling.
- What power is available? 115, 208/1, 208/3, 460/3?
- How much space is available for units?
- Will units be inside or outside?
- How will supply air be distributed? Free blow or ducted?
- Where will condenser air be discharged?
- How will condensate be removed? Tanks or pumped?
- When are units needed?
- How long are units needed?
